What this standard covers

This standard specifies the functional requirements of the IP/MPLS network management system supporting multi-service bearer, and mainly stipulates functional requirements such as EMS management, topology management, configuration management, fault management, performance management and security management. This standard is applicable to IP/MPLS network management systems supporting multi-service bearer. In view of the fact that the access network layer is allowed to use MPLS-TP networking, this part also proposes network management function requirements for IP/MPLS and MPLS-TP hybrid networking.

Document data

International classification (ICS): 33.040.

Chinese classification (CCS): M15.

Estimated length of the Chinese original: 42,486 words.
