What this standard covers

This standard specifies the general requirements for the performance measurement method of the terminal MIMO antenna LTE wireless terminal space radio frequency receiver, mainly including the throughput performance measurement method and performance requirements in different channel scenarios. This standard applies to LTE wireless terminals for portable and in-vehicle use, as well as those powered by AC power and used in fixed locations, and data devices connected to portable computers through interfaces such as USB, Express, and PCMCIA interfaces.

Document data

International classification (ICS): 33.060.20.

Chinese classification (CCS): M37.

Estimated length of the Chinese original: 47,454 words.
