What this standard covers

This standard specifies the general requirements for the performance and measurement methods of the space RF receiver of the terminal MIMO antenna 5G NR wireless terminal (frequency band below 6GHz), mainly including the throughput performance measurement method and performance requirements in different channel scenarios. This standard applies to NR wireless terminals used in portable and vehicle-mounted applications, as well as wireless terminals powered by AC power and used in fixed locations, and data devices connected to portable computers through interfaces such as USB, Express, and PCMCIA.

Document data

International classification (ICS): 33.060.20.

Chinese classification (CCS): M37.

Estimated length of the Chinese original: 44,449 words.
