What this standard covers

This standard specifies the security requirements for mobile application software in terms of operating mechanism, malicious behavior prevention, and terminal function invocation, and provides principles for determining the security of application software. This standard applies to application software provided by Internet information service providers that can be downloaded, installed, and upgraded through mobile smart terminals. It also applies to the supervision, management, and evaluation of the security of mobile application software by competent authorities, third-party evaluation agencies, and other organizations.
