What this standard covers

This standard specifies the SWP mode smart card and the full terminal mode built-in security module test method based on 13.56MHz near field communication. The SWP mode smart card includes physical characteristic test, electrical characteristic test, function test, etc. The full terminal mode built-in security module includes mobile phone customers. Tests such as end, logical channel, transaction protection mechanism, concurrent service support, and multi-application management functions.

Document data

Chinese classification (CCS): M60.

Estimated length of the Chinese original: 14,195 words.
