What this standard covers

This standard specifies the security threats and challenges faced by cloud service customers, cloud service providers, and cloud service partners in a cloud computing environment, and clarifies the security capabilities that can mitigate these risks and address security challenges. The framework approach provided by this standard is used to determine which of these security capabilities need to be specified in terms of mitigating cloud computing security threats and addressing security challenges. This standard applies to cloud computing.

Document data

Chinese classification (CCS): M10.

Estimated length of the Chinese original: 23,263 words.

Adopted international standard: ITU-T X.1601, IDT.
