What this standard covers

This standard specifies the basic requirements for the technical means of information security management for content distribution network services. This standard is applicable to the business information security management system constructed by CDN business units that provide Internet information service providers with services such as, but not limited to, webpage acceleration, download acceleration, and streaming media acceleration. This standard applies to the access switch of the user host in the IPv4/IPv6 transition scenario. The main operations involved in the technical solution are applicable to the process of listening to the address allocation protocol and performing binding verification on the host related attributes.
