What this standard covers

This standard specifies a general-purpose packet source address verification and traceability framework based on SAVI technology in the IPv4/IPv6 transition scenario, including a general overview of the solution, attribute analysis of the tunnel scenario, and different attribute combination scenarios. The source address verification scheme, the traceability scheme, the scheme verification example, and the applicability of the scheme under the dual stack and translation scenarios.

Document data

Chinese classification (CCS): L78.

Estimated length of the Chinese original: 11,165 words.
