What this standard covers

This standard specifies the technical characteristics, such as service characteristics, system architecture, functional entities, and business processes of a WebRTC system based on a unified IMS network, and manages the number resource management, calling number transmission, and service consistency of the system. Continuity, security and quality of service have made relevant requirements. This standard applies to Web-based real-time communication systems based on unified IMS.

Document data

International classification (ICS): 33.030.

Chinese classification (CCS): M21.

Estimated length of the Chinese original: 20,267 words.

Adopted international standard: 3GPP TR 23.706, NEQ; 3GPP TR 23.701, NEQ; 3GPP TS 23.228, NEQ.
