What this standard covers

This standard specifies the card structure and remote management architecture of the embedded UICC, and specifies the interface requirements between the embedded UICC and SM-SR, SM-SP and MNO. The embedded UICC related services include: remote activation, remote logout, and rollback mechanism without network coverage. This standard specifies the requirements of these three services, and specifies the policy control requirements of the embedded UICC.

Document data

International classification (ICS): 33.030.

Chinese classification (CCS): M31.

Estimated length of the Chinese original: 27,242 words.
