What this standard covers

This standard specifies the technical requirements for intelligent communication networks to support cloud computing WAN interconnection capabilities and virtual sensing, multi-tenant isolation, Layer 2 interconnection, data center network virtualization, and user traffic optimization. This standard is applicable to the construction of an intelligent communication network wide area network that supports cloud computing.

Document data

International classification (ICS): 33.040.01.

Chinese classification (CCS): M19.

Estimated length of the Chinese original: 14,124 words.
