What this standard covers

This standard specifies the mechanism for allocating IPv4 address resources for IPv4 users in an IPv6 network using the IPv4 dynamic host configuration protocol in an IPv6 access network to implement cross-heterogeneous network address resource delivery. This standard is applicable to the address allocation of the transition mechanism of the IPv4-over-IPv6 scenario such as the edge network 4over6 technology and the edge network lightweight 4over6 technology.

Document data

International classification (ICS): 33.040.40.

Chinese classification (CCS): M32.

Estimated length of the Chinese original: 9,927 words.
