What this standard covers

This standard specifies the indicators reflecting the overall network service quality in GSM/TD-SCDMA/WCDMA networks. These indicators reflect the Tele-Service and Bearer-Service services provided by radio access networks and core networks. The end-to-end quality of service can be used by operators or government regulators to assess the end-to-end service quality of a mobile communications network. This standard is applicable to telecommunication services and bearer services provided by mobile communication networks, and does not apply to value-added services based on mobile communication networks.

Document data

International classification (ICS): 33.040.

Chinese classification (CCS): M11.

Estimated length of the Chinese original: 17,123 words.
