What this standard covers

This standard specifies the test requirements for digital cellular mobile communication terminals to support IPv6 service function testing (mainly including service access, switching or redirection, IPv6 priority and fallback functions, etc.), as well as interface protocol testing for terminals to support IPv6 address allocation, etc. . This standard applies to the research, testing, production and design of digital cellular mobile communication terminals supporting IPv6 capabilities by relevant scientific research institutes, testing institutions, operating companies and terminal manufacturers.

Document data

International classification (ICS): 33.060.99.

Chinese classification (CCS): M36.

Supersedes the earlier edition YD/T 3269-2017.
