What this standard covers

This standard specifies the test methods for Beidou timing equipment supporting communication applications, including Beidou satellite receiving function test, synchronous input function test, clock function test, timing output function test, monitoring management function test, satellite receiver sensitivity test, satellite receiver. Capture time test, positioning accuracy test, and frequency and time output performance test. This standard applies to Beidou timing equipment that supports communication applications. For the test of the satellite timing module supporting Beidou, it can also be used for reference.

Document data

Chinese classification (CCS): M33.
