What this standard covers

This standard specifies the signaling requirements for the interworking between the unified IMS network (second phase) and the short message service of the CDMA network, including the network interworking model, network element functional requirements, signaling procedures, and parameter requirements. This standard applies to IP short message gateways, converged short message centers and user terminals that provide IMS SMS for VoLTE users.

Document data

Chinese classification (CCS): M12.

Estimated length of the Chinese original: 27,222 words.
