What this standard covers

This standard specifies the system overview, platform architecture, functional requirements, interface requirements, process requirements, performance requirements, network management requirements, statistical requirements, hardware and software requirements, and system security requirements of the mobile Internet traffic integrated gateway. The mobile internet traffic integrated gateway platform provides traffic processing capabilities for the mobile Internet, excluding traditional WAP gateway capabilities. This standard applies to telecom operators, equipment providers in the communications industry and related service providers to carry out mobile Internet traffic integrated gateway platform equipment.
