### What this standard covers

This standard specifies the requirements for distributed elastic network interconnection based on link aggregation, including application scenarios, system architecture, functional requirements, key process requirements, protocol entities, protocol state machines, protocol formats, protocol interactions, and non-functional requirements. This standard applies to the design and deployment of packet switching equipment and network interconnection protection.

### Document data

Chinese classification (CCS): L78.

Estimated length of the Chinese original: 46,447 words.
