What this standard covers

This standard specifies the technical requirements for terminal equipment of broadband trunking communication systems based on LTE technology, including the architecture and protocol of terminal equipment, terminal classification, service functions and performance requirements, functional requirements, RF performance requirements, audio and video codec requirements, interface requirements, Power requirements, environmental and reliability requirements. This standard applies to terminal equipment of the Broadband Cluster Communication (B-TrunC) system (Phase 1) based on LTE technology.

Document data

Chinese classification (CCS): M36.

Estimated length of the Chinese original: 28,249 words.
