What this standard covers

This standard specifies the networking methods, protocols, networking functions, networking performance, interfaces and management requirements of mesh devices in the form of an intelligent gateway as the main node device in broadband customer networks. This standard is applicable to mesh devices in the broadband customer network based on the public telecommunication network that take the intelligent gateway as the main node device and adopt WLAN or Ethernet networking. Other private networks can also be used for reference.

Document data

Chinese classification (CCS): M33.
