What this standard covers

This standard specifies the overall technical requirements for roaming based on Gx interface, including the overall network architecture of Gx interface roaming, functional requirements of network elements, interface functional requirements, and signaling procedures, while considering NAT between mobile networks and external public data service networks. Deployment and non-NAT deployment scenarios. This standard applies to policy and charging control in inter-regional roaming scenarios, and is not applicable to policy and charging control of roaming between international roaming and carriers.

Document data

Chinese classification (CCS): M36.
