What this standard covers

This standard specifies the classification and type, material and structure, appearance size, component polarity and product performance requirements of prefabricated double-core connector optical cable assemblies, and describes the corresponding test methods, inspection rules, marking, packaging, transportation, etc. and storage. This standard is applicable to the design, development, production and inspection of prefabricated end assemblies of twin-core connector optical cables used in integrated wiring of data centers.

Document data

Chinese classification (CCS): M33.

Estimated length of the Chinese original: 28,228 words.
