What this standard covers

This standard specifies the interface functional requirements between the EMS-NMS of the packet-enhanced optical transport network (OTN) network, and mainly regulates the interface functional requirements such as configuration management, fault management, and performance management. This standard applies to the interface between the packet-oriented Enhanced Optical Transport Network (OTN) Network Management System (EMS) and the Network Management System (NMS).

Document data

Chinese classification (CCS): M15.
