What this standard covers

This standard specifies the security operation and maintenance requirements of the management platform at nine levels: information assets, operation and maintenance services, equipment monitoring, data storage, network security, operation and maintenance events, operation and maintenance reports, IP addresses, and operation and maintenance knowledge base. This standard applies to: guiding organizations that provide security operation and maintenance services for the Internet of Things information system to establish a security protection system for the management platform; the Internet of Things information system security operation and maintenance service providers to evaluate the conditions and capabilities of their own management platforms; the Internet of Things information system security operation and maintenance service demanders to evaluate and select management platform suppliers; third parties to evaluate and certify the conditions and capabilities of the Internet of Things information system security operation and maintenance management platform.
