What this standard covers

This standard specifies the user data security protection capability requirements and evaluation methods that public cloud cloud computing service providers should have when providing cloud computing services, including pre-prevention capabilities, in-process protection capabilities, and post-event traceability capabilities. This standard is applicable to third-party organizations to provide reference for the review and assessment of public cloud computing service providers' cloud computing service user data security protection capabilities, and also to provide reference for public cloud cloud computing service providers to build user data security protection capabilities.
