What this standard covers

This standard specifies the principles, rules, elements and methods for the identification of important data in the telecommunications field. This standard is applicable to guiding telecommunications data processors to carry out the identification of important data in the telecommunications field. After identifying important data according to this standard, data processors can further identify core data involving military, government affairs, state secret information and other data processing activities according to relevant policy documents, and implement them in accordance with relevant national regulations, which are not applicable to this standard.

Document data

International classification (ICS): 33.040.

Chinese classification (CCS): M10.

Estimated length of the Chinese original: 12,196 words.

Supersedes the earlier edition YD/T 3867-2021.
