What this standard covers

This standard specifies the basic functions, network resource allocation capabilities, resource interworking authority, availability, operation and maintenance management when an enterprise provides interconnection services or solutions between users' virtual private clouds belonging to the same public cloud, across regions or in the same region. The eight aspects of function, metering and billing accuracy, data privacy, and network performance that need to be followed and the capabilities that should be possessed. This standard applies to cloud service providers that provide relevant cloud computing services to customers.
