What this standard covers

This standard specifies the hierarchical solution architecture for the validity verification of the source address of the Internet IP message, and specifies the effect and goal of the source address verification to be realized at each level, so as to systematically solve the problem of the validity verification of the Internet IP source address. At the same time, a possible scheme design example is given for the source address verification scheme of each level. This standard applies to packet source address verification in the general routing and addressing scenario of the Internet.
