What this standard covers

This standard specifies the test methods for the flexible Ethernet (FlexE) link interface, including the configuration management function, interface function and performance, service bearing and specification capabilities, clock synchronization function and performance of the FlexE link interface, and flexible Ethernet client signals (FlexE Client) bandwidth assurance and reliability test methods. This standard applies to network equipment that supports flexible Ethernet (FlexE) link interfaces, such as sliced ??packet networks (SPNs), routers, Ethernet switches, optical transport networks (OTNs), etc.
