What this standard covers

This standard specifies the test methods for the basic functions, RF performance, wireless resource performance, protocol consistency and other aspects of 5G enhanced mobile broadband terminal equipment in the frequency band below 6GHz. This standard is applicable to the testing of 5G terminals in the frequency band below 6GHz that support enhanced mobile broadband scenarios (eMBB), and is oriented to non-standalone networking (Non-Stand Alone) and standalone networking (Stand Alone).

Document data

International classification (ICS): 33.060.99.

Chinese classification (CCS): M36.

Estimated length of the Chinese original: 809,868 words.

Supersedes the earlier edition YD/T 4002-2021.
