What this standard covers

This standard specifies the security protection requirements of the 5G multi-access edge computing platform according to the security protection level, involving application security, network security, device security, data security, physical environment security and management security. This standard is applicable to 5G multi-access edge computing platforms constructed and operated by basic telecommunication service operators independently or in cooperation with third parties and by users themselves. This standard mainly proposes security protection requirements for 5G multi-access edge computing platforms. For the security protection requirements of other related networks and system units such as core network, data center, public cloud, and enterprise local network, see the corresponding network and system unit types. safety protection standards.
