What this standard covers

This standard specifies the technical requirements for the FDN-based broadband network access control forwarding interface, specifically including the FDN-based broadband network access service forwarding control separation architecture, the technical requirements for the interface between the control plane function and the forwarding plane functional entity, and the FDN-based broadband network. Access the service call flow. This standard is applicable to broadband network access servers with separation of transfer and control, and can guide the R&D, operation and maintenance of FDN-based broadband network access servers.
