What this standard covers

This standard specifies the technical requirements for implementing number portability in LTE networks, including general requirements, voice service flow, point-to-point short message service flow, point-to-point multimedia message service flow, non-point-to-point short message/multimedia message service flow, and related equipment requirements. This standard is applicable to the number portability technology solution under two transition schemes of CSFB and dual standby for LTE network voice using VoLTE technology and circuit domain (2G/3G).
