What this standard covers

This standard specifies the overall technical requirements for implementing data shutdown services in LTE networks, including application scenarios for data shutdown, network element functions, interface requirements, protocols, and signaling procedures. This standard applies to the development and application of 4G core network equipment and terminals that support LTE data off service, including PGW, PCRF, IMS and other network elements, as well as NAS interfaces, S11, S5/S8 interfaces, Gx interfaces, and IMS network interfaces.
