What this standard covers

This standard specifies the equipment test methods for the passive optical network (PON) technology used in industrial Internet networking, including the test methods for the interface, function, performance, operation, management and maintenance of the central office equipment (OLT) and user-side equipment (ONU). This standard applies to the testing of passive optical network (hereinafter referred to as industrial PON) equipment in industrial Internet scenarios, including industrial PON equipment based on EPON and GPON technology systems.
