Foreword

YD/T 6774-2026 is a recommended industry standard of the People's Republic of China in the Telecom sector, approved and issued by the Ministry of Industry and Information Technology on 15 April 2026, with effect from 1 August 2026.

It is administered by the China Communications Standards Association.

Classification: ICS 30.040.40; CCS L78.

1 Scope

The document sets out the technical requirements for the management interface of network devices that support multi-rule lists. It covers functions for user management, device configuration, interface configuration and service rule management, as well as the requirements for how the management interface is called and for the communication procedures. It applies to the design, research and development, testing and evaluation of traffic aggregation and distribution devices, deep packet inspection devices and their management interfaces in telecommunication networks and the internet.

It is used by manufacturers of these devices and of the related management systems, by telecommunication operators, and by test laboratories. It is a voluntary standard issued by the Ministry of Industry and Information Technology on 15 April 2026 and effective from 1 August 2026. It is a new standard.
