### Foreword

YD/T 6821-2026 is a recommended industry standard of the People's Republic of China in the Telecom sector, approved and issued by the Ministry of Industry and Information Technology on 15 April 2026, with effect from 1 August 2026.

It is administered by the China Communications Standards Association.

Classification: ICS 35.030; CCS M10.

### 1 Scope

The document specifies the general requirements and the interface interaction data requirements, among others, for the interface between two systems: the enterprise-side security monitoring and collaborative management system of an industrial Internet enterprise, and the industrial Internet security monitoring system operated on the side of the industry regulator. It applies to the planning, design and implementation of this interface, so that the enterprise system and the regulator-side system can exchange security monitoring information in an agreed way.

The standard is voluntary, as the /T in its code shows. Industrial Internet enterprises, developers of monitoring and management systems, system integrators and the bodies that operate regulator-side monitoring systems are the people who need it. The Ministry of Industry and Information Technology approved it; it was issued on 15 April 2026 and takes effect on 1 August 2026. It is a new standard and is closely tied to the technical requirements for the enterprise-side system itself.
