Foreword

YD/T 6844-2026 is a recommended industry standard of the People's Republic of China in the Telecom sector, approved and issued by the Ministry of Industry and Information Technology on 15 April 2026, with effect from 1 August 2026.

It is administered by the China Communications Standards Association.

Classification: ICS 35.240.01; CCS L70.

1 Scope

YD/T 6844-2026 is a guideline. It describes the security risks of intelligent speech technology in the stages of data collection, model building and technical application, and sets out ways of responding to those risks. It applies to the parties that research intelligent speech technology when they carry out risk assessment, risk response and related work.

Research teams, developers of speech products, service providers that deploy them, and security reviewers can use it as a reference for structuring their own risk work. Because it is a guideline, it is voluntary, as the /T in its code shows, and it was approved by the Ministry of Industry and Information Technology. It was issued on 15 April 2026 and takes effect on 1 August 2026. It is a new standard and does not replace an earlier edition. The English translation allows international developers and compliance teams to read the Chinese approach to speech technology risk in full.
