Foreword

YD/T 6892-2026 is a recommended industry standard of the People's Republic of China in the Telecom sector, approved and issued by the Ministry of Industry and Information Technology on 1 June 2026, with effect from 1 September 2026.

It is administered by the China Communications Standards Association.

Classification: ICS 33.040.40; CCS M32.

1 Scope

The document specifies the maturity model framework for the operation of computing centres, the evaluation indicators, and the grading requirements. The model framework has three parts: operation strategy capability, operation assurance capability, and operation technology capability. The standard is used to judge how mature a centre's operation is and to give direction for improving it.

It applies to the evaluation and guidance of computing centre operation across all industries and for centres of different sizes and types. Computing centre operators, owners and customers, and evaluation bodies are typical users. It is a voluntary standard (code with /T). It was approved by the Ministry of Industry and Information Technology, issued on 1 June 2026 and takes effect on 1 September 2026. It is a new standard.
