Foreword

YD/T 6915-2026 is a recommended industry standard of the People's Republic of China in the Telecom sector, approved and issued by the Ministry of Industry and Information Technology on 1 June 2026, with effect from 1 September 2026.

It is administered by the China Communications Standards Association.

Classification: ICS 35.110; CCS M11.

1 Scope

The document specifies the functional test methods for smart real-time audio and video transport networks. The tests cover the functions of network perception, intelligent planning, intelligent matching and intelligent transmission.

It applies to product design, research and development, construction and operation, and evaluation and testing of smart real-time audio and video transport networks. Network equipment and platform developers, operators who build and run such networks and test laboratories are typical users. The /T in the code shows that it is voluntary. It was approved by the Ministry of Industry and Information Technology, issued on 1 June 2026 and takes effect on 1 September 2026. It is a new standard and does not replace an earlier edition, so functional testing of these networks can follow one common set of methods.
