What this standard covers

This standard specifies the installation of telecentres in various types of communications equipment within the port over-voltage over-current resistance, static discharge, technical requirements, test methods and test results assessed. This standard applies to all installations in the telecommunications center communications equipment, such as central office switching equipment, data equipment, transmission equipment, wireless devices, network equipment, such as over-voltage over-current protection performance of the test.

Document data

International classification (ICS): 33.020.

Chinese classification (CCS): M04;M40.

Estimated length of the Chinese original: 29,216 words.

Adopted international standard: ITU-T K.44-2003, NEQ.

Supersedes the earlier edition YD/T 950-1998.
