What this standard covers

This standard specifies the business requirements and overall framework of automotive information services based on ubiquitous networks. Business requirements include business classifications and functional requirements for each business: the holistic framework is described in a hierarchical form, including the application framework, the perceptual extension layer, the network transport layer, and the business support layer. This standard applies to the system construction, equipment development and business operation of vehicle information service based on ubiquitous network.

Document data

Chinese classification (CCS): M21.

Estimated length of the Chinese original: 32,358 words.
