What this standard covers

This standard specifies the testing method for flexural properties of sintered metal porous materials. This standard applies to the powder metallurgy method of production of sheet or plate sintered metal porous materials, including sintered metal fiber porous materials, sintered metal powder porous materials and metal foam, not suitable for sintered metal porous pipe and dense metal materials.

Document data

International classification (ICS): 77.160.

Chinese classification (CCS): H16.

Estimated length of the Chinese original: 6,651 words.
