What this standard covers

This standard specifies a method for inspecting internal defects in wrought aluminum alloy ingots using the ultrasonic pulse-echo method. This standard applies to the ultrasonic inspection of wrought aluminum alloy ingots that have undergone homogenization treatment; the ultrasonic inspection of wrought aluminum alloy ingots that have not undergone homogenization treatment can also refer to this standard.

Document data

International classification (ICS): 77.040.20.

Chinese classification (CCS): H26.

Estimated length of the Chinese original: 28,259 words.

Supersedes the earlier edition YS/T 874-2013, YS/T 1188-2017.
