What this standard covers

This standard specifies the method for the determination of the damping performance of sintered metal porous materials. This standard applies to sintered metal porous materials produced by powder metallurgy methods, including sintered metal fiber porous materials, sintered metal mesh porous materials, sintered metal powder porous materials and sintered metal foam porous materials, other metal damping materials or non-sintered formed metal Porous materials can also refer to this standard. This standard does not apply to dense metal materials.
