What this standard covers

This standard specifies the photoelectric direct reading spectroscopic analysis method for the content of alloy elements and impurity elements in tin and tin alloys. This standard is applicable to the determination of the content of 12 elements such as arsenic, iron, copper, lead, bismuth, antimony, cadmium, zinc, aluminum, silver, nickel and cobalt in tin and tin alloys.

Document data

International classification (ICS): 77.120.60.

Chinese classification (CCS): H13.

Estimated length of the Chinese original: 13,120 words.
