What this standard covers

This standard specifies the methods and requirements for quantifying the carbon footprint of lead ingot products, including the purpose of quantification, scope of quantification, inventory analysis, impact assessment, result interpretation, reporting, and declaration. This standard applies to the quantification of the carbon footprint of lead ingot products produced from lead ore or lead-containing waste. This standard also applies to the quantification of the carbon footprint of preceding products of lead ingots. Common preceding products include: lead ore, lead concentrate, crude lead, pyrometallurgically refined lead, and lead alloy ingots produced from recycled lead smelting.

Document data

International classification (ICS): 13.020.10.

Chinese classification (CCS): Z04.

Estimated length of the Chinese original: 43,417 words.
