What this standard covers

This standard specifies the method for determining the content of aluminum, lead, iron, manganese and magnesium in antimony beryllium core blocks by inductively coupled plasma atomic emission spectrometry. This standard is applicable to the determination of the content of aluminum, lead, iron, manganese and magnesium in antimony beryllium core blocks semi-finished products and finished products, with a determination range of 0.0050% to 0.20%.

Document data

International classification (ICS): 77.120.99.

Chinese classification (CCS): H14.

Estimated length of the Chinese original: 11,183 words.

Supersedes the earlier edition YS/T 426.3-2000, YS/T 426.4-2000.
