What this standard covers

This standard specifies the method for determining the content of beryllium, cobalt, nickel, titanium, iron, aluminum, silicon, lead, magnesium and phosphorus in copper-beryllium alloy by inductively coupled plasma atomic emission spectrometry. This standard is applicable to the determination of the content of beryllium, cobalt, nickel, titanium, iron, aluminum, silicon, lead, magnesium and phosphorus in copper-beryllium alloy.

Document data

International classification (ICS): 77.120.30.

Chinese classification (CCS): H13.

Estimated length of the Chinese original: 17,134 words.

Supersedes the earlier edition YS/T 470.1-2004.
