What this standard covers

This standard specifies the requirements for carbonaceous materials used in aluminum measuring device at an average linear thermal expansion coefficient of 20°C ~ 300°C between, test methods, inspection rules, signs, packaging, transportation. This standard applies to the determination of the average unit linear thermal expansion coefficient of aluminum with carbon material between 20°C ~ 300°C for.

Document data

International classification (ICS): 71.100.10.

Chinese classification (CCS): Q52.

Estimated length of the Chinese original: 10,182 words.
